PROJECTS

- Title-Note seperator
  Description- We designed a machine learning-based system to classify genuine and counterfeit notes or images, using visual features such as patterns, watermarking, and security markers. Integrated deep learning and computer vision techniques for robust detection.
  Tech Stack:Python, OpenCV, TensorFlow, Scikit-learn
  Achievements:
  Secured 2nd prize at a department-level tech competition for innovative approach and implementation.
- Title: SMS Spam Detection using TensorFlow
  Description: Designed a deep learning model that is able to classify SMS messages as either spam or legitimate by the use of natural language processing and TensorFlow. The preprocessed data was tokenized, vectorized, and then padded into a sequential model.
  Tech Stack: Python, TensorFlow, Keras, NLTK,

INTERSHIPS

- Company Name - Accenture
  Duration: 3 months
  Designation: Online Intern through DevTown
  Worked on an online internship for software development and system optimization.
  Contributed in coding, testing, and debugging works through different programming languages and frameworks.
  Virtual collaboration with teams to enhance workflows in projects and improve the software's performance.
  Practical experience in real-world application development with industry-standard tools.

CO-CURRICULAR & EXTRA CURRICULAR ACTIVITIES

- Online Courses & Certifications:
  Completed course on topic Python Crash Course from Coursera.
